

# Toolbar

Within the [edit window](#), the toolbar helps users formatting their texts without remembering the [syntax](#).

The toolbar buttons work pretty much like the formatting buttons in your favorite word processor. Select a word or phrase and press a button to format the selection. If you click without a selection, a sample text is inserted at the cursor.

The toolbar also gives access to the [media manager popup](#).

⚠ If the toolbar does not show up for you, follow the steps outlined in the [toolbar FAQ](#) to troubleshoot the problem!

## Toolbar Buttons

Most buttons have shortcuts assigned to them based on the [access keys](#) of your browser, usually the accesskeys are: ALT + <Key> or ALT + Shift + <Key> on Windows and CTRL + ⌘ Opt + <Key> on Mac, please refer to the [access keys](#) for more details.

Button	Key	Function
	<b>b</b>	Bold formatting
	<b>i</b>	Italic formatting
	<b>u</b>	Underlined formatting
	<b>c</b>	Code formatting
	<b>d</b>	Strike-through formatting

## 3rd party tools

We have added in the following 3rd party tools.

- wrap
  - Add advanced formating and callouts to wiki text
- keyboard
  - flag `Any` text to look like a keyboard key.
- Indexmenu
  - Insert a smaller version of the index to auto populate a section.
